Recruitment Area

Ohio (State Specific)
OPTI’s Mission & Vision

Mission: Serve osteopathic graduate medical education programs as an academic sponsor
Vision: Be a champion for osteopathic principles and practices and a bridge to ACGME accreditation

OPTI Strategic Objectives

1. Advancing learning and clinical research
2. Advancing educator training and support
3. Advancing organizational synergy
4. Integrating osteopathic principles and practice
Faculty and Resident Development

Ohio University's Heritage College of Medicine (HCOM) Office of Faculty Development (FD) employs one educator who plans and executes various FD programs and resources throughout HCOM and CORE. Other educators can be accessed by contract when needed. The FD plan includes programs that are needs-based and assessment-driven. The following services and programs are available:

- Onboarding new clinical faculty is accomplished through a welcome letter and orientation checklist that includes a link to the OPP module.
- New PDs, DMEs, and Medical Education Staff are sent a welcome letter electronically that includes an overview of the CORE and a description of the resources provided. CORE staff information is included and questions are encouraged. Consultation and remediation of trainees are conducted with a learning plan developed in conjunction with the resident, contracted Ohio University staff, program directors and other medical education staff. - FD Self-Assessment is available online for faculty to self-assess their current level of expertise and desire to master faculty development domains. - Three Certificate training programs are offered which are tailored to the needs of faculty and residents. They are the Academic Healthcare Leaders and Managers Fellowship Program, Academic Clinical Educators-Osteopathic Principles and Practices Certificate Program, and CORE Academic Physicians – Residents. - Site visits are completed by the Chief Academic Officer in partnership with the clinical education team to meet with those involved in trainee education.

Research

The CORE continues to provide a continuum of research education, collaboration and support for medical students, residents, fellows, and hospital clinical faculty throughout HCOM. We continue to award conference presentation travel and seed funding, and one-on-one project support from idea development, to statistical analysis and interpretation, culminating in dissemination. Since July 1, 2016 under the CORE Essentials model, members have been allocated three hours research support per resident through the OGME Academic Sponsorship Contract. These hours can be used as determined by the hospital for resident, as well as faculty, support. Services offered will remain the same as well as seed funding and travel. Additional research support can be purchased by members once the hours allocated under the CORE Essentials model has been expended. HCOM will continue to provide in kind support for research.

Osteopathic Principles & Osteopathic Manipulative Treatment (OMT)

Our OPTI promotes the integration of OPP throughout all of its AOA postdoctoral programs through the work of the Chair, Osteopathic Manipulative Medicine Department/Director of Osteopathic Integration and the Administrator of Osteopathic Integration. They work together to develop osteopathic curriculum for all trainees and to facilitate integration of osteopathic medicine within programs and hospitals. A continued focus on osteopathic medicine exists within the CORE Essentials Model and options exist for purchasing additional resources should a specific program or institution have that need. Further, CORE personnel have developed a number or resources to promote osteopathic integration including the following:

- Revised curriculum materials that supported a flipped classroom approach
- Sample osteopathic curriculum for surgical specialties
- 4-part videoconference series focused on the requirements of Osteopathic Recognition
- Osteopathic Recognition brochure highlighting the rationale for applying and offered assistance
- OMM Billing and Coding presentations
- An electronic library collection of case-based OMM treatments

New Program Development

The CORE OPTI is committed to ensuring all sponsored programs are either successfully transitioned to ACGME accreditation or the program is closed in a manner that is not disruptive to the residents. As such, our current efforts focus on supporting existing partners and strengthening UME relationships with partners in an effort to revisit expansion in the near future.

Statement that applies to this OPTI

- This OPTI prefers to assist new programs EARLY in the formation process

Special or Unique Services Provided by this OPTI
In light of the Single Accreditation System announcement, the CORE Board allocated up to $200,000 in funding to support transitional activities. These monies have been used to hire a consultant to educate partners in understanding ACGME standards, provide funding for additional personnel dedicated to the transition, and host an ACGME Summit (Spring, 2015), where state and national leaders discussed ACGME standards and Osteopathic Recognition. Continued unique elements: - Statewide program directors meetings (Clinical Divisions) - Statewide resident education and training based on need - OMM Quick card publication and availability nationally - Regional skills training for osteopathic medicine - Monthly Medical Education Coordinator Meetings - Educational and networking opportunities for Medical Education Leaders (DMEs, PDs, etc.) Other notable efforts: - Innovative programming between the college and an OPTI partner was facilitated through OPTI leadership. As a result, an educational pilot project occurred that trained hospital leaders and providers to use concepts of Adaptive Design. (ongoing) - Development of osteopathic medicine surgical curriculum. (ongoing) - Development of osteopathic medicine surgical curriculum research project
